

1. (Currently Amended) A method for identifying a location, comprising:  
providing a viewing apparatus that enables a user to have a view of his or her surroundings and to select a location from the view of the surroundings for identification;  
causing the viewing apparatus to transmit location information regarding the location as selected by the user for the identification, the location information including an image of a target in the surroundings;  
providing a location identification device operative to receive the location information, to use the location information to determine identification information for the location in response to at least the image of the target, and to transmit the identification information to the viewing apparatus; and  
causing the viewing apparatus to display the identification information on the view of the surroundings.

2. (Original) The method of Claim 1, wherein causing the viewing apparatus to transmit the location information regarding the location as selected by the user for the identification comprises causing the viewing apparatus to transmit orientation information regarding the location as selected by the user for the identification.

3. (Original) The method of Claim 1, wherein causing the viewing apparatus to display the identification information comprises causing the viewing apparatus to display the identification information in association with the location on the view of the surroundings.

4. (Original) The method of Claim 1, wherein the identification information comprises an address.

5. (Original) The method of Claim 1, wherein the identification information comprises a telephone number.

6. (Currently Amended) A system for identifying a location, comprising:  
a viewing apparatus  
providing a user with a view of his or her surroundings,  
allowing the user to select a location from the view of the surroundings for  
identification, and  
operative to transmit location information data regarding the location, the  
location information including an image of a target;  
a location identification device operative  
to receive the location information,  
to use the location information to obtain identification information about the  
location in response to at least the image of the target, and  
to transmit the identification information to the viewing apparatus; and  
the viewing apparatus further operative  
to display the identification information about the location on the view of the  
surroundings.

7. (Original) The system of Claim 6, wherein the viewing apparatus is operative to  
display the identification information about the location on the view of surroundings in  
association with the location in the view.

8. (Original) The system of Claim 6, wherein the identification information  
comprises an address.

9. (Original) The system of Claim 6 wherein the identification information  
comprises a telephone number.

10. (Currently Amended) ~~The system of Claim 6,~~ A system for identifying a  
location, comprising:  
a viewing apparatus  
providing a user with a view of his or her surroundings,

allowing the user to select a location from the view of the surroundings for identification, and

operative to location information data regarding the location;

a location identification device operative

to receive the location information,

to use the location information to obtain identification information about the location, and

to transmit the identification information to the viewing apparatus; and

the viewing apparatus further operative

to display the identification information about the location on the view of the surroundings;

wherein the viewing apparatus allows the user to select an orientation of the location from the view of the surroundings for the identification, and the viewing apparatus is operative to transmit the location information including the orientation regarding the location.

11. (Currently Amended) The system of Claim 10, wherein the location identification device is operative to receive the location information and the orientation, to use the location information and the orientation to obtain the identification information about the location.

12. (Currently Amended) A method for identifying a location, comprising:  
providing a view of his or her surroundings to a user;  
determining a location in the view to be within a specified distance from the user;  
responding to the determination by using location information to identify the location  
in response to at least an image of a target in the view of his or her surroundings; and  
displaying identification information relating to the location on the view of his or her surroundings to the user.

13. (Original) The method of Claim 12, wherein displaying the identification information comprises displaying the identification information in association with the location on the view of his or her surroundings.

14. (Original) The method of Claim 12, wherein the identification information comprises an address.

15. (Original) The method of Claim 12, wherein the identification information comprises a telephone number.

16. (Original) The method of Claim 12, wherein determining the location in the view comprises determining the location and the orientation in the view to be within the specified distance from the user.

17. (Original) The method of Claim 16, wherein responding to the determination by using the location information to identify the location comprises responding to the determination by using the location information and the orientation to identify the location.
